

Contoso Devices Product Manual

Customer Support Knowledge Base

1. Product Overview

Contoso smart devices are designed for connected consumer use with supported mobile applications, Bluetooth, Wi-Fi, and voice-assistant functionality where available. Always follow the instructions for the specific device model.

2. Package Contents

Before setup, confirm that the package contains the device, supplied charger, applicable accessories, and documentation. If an expected component is missing, contact support with order information.

3. Initial Setup

Remove the device from its packaging and inspect it for obvious physical damage. If damage is visible on arrival, do not assume it is a manufacturing defect; contact support promptly and follow the return or delivery-damage process.

Connect the supplied charger and charge the device for approximately 2 hours before first use. Keep the device on a stable surface during setup.

4. Power and Controls

Use the power control as described for the device. If the device does not turn on, verify charge level and charger connection before attempting additional troubleshooting.

Avoid forcing buttons or controls. If a control becomes physically damaged, stop using the device and contact support.

5. Bluetooth Pairing

Enable Bluetooth on the mobile device, place the Contoso device within normal range, and select the device from the available Bluetooth list. If pairing fails, restart Bluetooth, restart the devices, remove an old pairing if necessary, and retry.

If Bluetooth repeatedly disconnects, check distance, interference, battery level, and available firmware updates.

6. Wi-Fi Configuration

Use the mobile application or device setup process to select the intended Wi-Fi network and enter the correct credentials. Ensure the device is within reliable network range.

If Wi-Fi repeatedly disconnects, restart the device and network equipment where appropriate, verify network stability, and retry setup.

7. Mobile Application

Install and use the supported Contoso mobile application where applicable. Keep the application updated. If it becomes unresponsive, restart the application, verify internet connectivity, and retry.

8. Voice Assistant

Where supported, voice-assistant functionality requires appropriate connectivity and device configuration. If the voice assistant does not respond, verify internet connectivity, update device firmware, and restart the device.

9. Firmware and Software Updates

Keep firmware and application software current when updates are offered. Maintain adequate battery charge and stable connectivity during an update.

Do not disconnect power or deliberately interrupt an update unless the instructions explicitly require it. If an update fails, retry according to the displayed instructions and contact support if the issue persists.

10. Maintenance and Cleaning

Clean the device according to its care instructions. Use a dry microfiber cloth for routine cleaning. Do not expose the device to water or chemical cleaners.

Store the device in a dry environment away from extreme heat and excessive moisture.

11. Safety

Keep the device away from water and extreme heat. Use only the supplied charger. Stop using the device if it becomes unusually hot, physically damaged, or otherwise unsafe.

If overheating occurs, turn off the device, allow it to cool, and contact support if overheating continues.

12. Reset and Factory Reset

A normal reset can resolve temporary software or connectivity problems. A factory reset may remove configuration information and should be used only when appropriate. Follow the device-specific procedure before performing a factory reset.

13. Common Error Conditions

For connectivity errors, verify network or Bluetooth conditions. For power errors, check charging and the supplied charger. For application errors, restart the application and verify connectivity. For persistent errors, record the message and contact support.

14. When to Contact Support

Contact customer support when troubleshooting steps do not resolve the issue, when the device shows physical damage, when overheating persists, or when a suspected warranty condition requires review. Standard support hours are Monday through Friday, 9:00 AM–6:00 PM IST, with limited weekend email support.

Operational Scenarios

Scenario: Device arrives physically damaged. Stop normal setup and contact support promptly so the condition can be reviewed.

Scenario: Device becomes hot during use. Turn it off, allow it to cool, keep it away from extreme heat, and contact support if overheating continues.

Scenario: Bluetooth works intermittently. Check distance, battery, interference, restart the devices, and update firmware if available.

Scenario: Voice assistant stops responding. Check internet connectivity, update firmware, and restart the device.

Maintenance FAQ

Can I clean the device with water? No. Keep the device away from water and use the recommended dry microfiber cleaning method.

Should I use a different charger? No. Use only the supplied charger.

How long should I charge before first use? Approximately 2 hours.

What should I do after a failed update? Verify stable power and connectivity, retry according to instructions, and contact support if it continues.

Detailed Customer Scenarios and Decision Examples

The following examples illustrate how the knowledge base should be applied to different customer wording. The examples intentionally use varied language so retrieval systems can connect related requests to the correct policy.

Power example

If the device does not turn on, charge it with the supplied charger, verify the connection, and retry the power control. Persistent failure should be escalated.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Charging example

Before first use, charge the device for approximately 2 hours. Only the supplied charger should be used.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Bluetooth example

If pairing fails, enable Bluetooth, move the devices closer together, restart Bluetooth, and retry pairing.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Wi-Fi example

If Wi-Fi cannot connect, verify network credentials and signal range, restart the device, and retry configuration.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Safety example

If the device overheats, turn it off and allow it to cool. Keep it away from extreme heat and contact support if overheating continues.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Cleaning example

Routine cleaning should use a dry microfiber cloth. The device should not be exposed to water or chemical cleaners.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from

the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Knowledge Retrieval Reference

Customer questions may use different terms from the policy. For example, a customer may say that an item is broken, faulty, damaged, defective, or not working. The support process should distinguish the underlying condition rather than relying on a single keyword.

A return question should be evaluated against the return period, product condition, reason for return, and applicable exclusions. A warranty question should be evaluated against warranty duration, covered conditions, and exclusions.

A shipping question should be evaluated against order processing, carrier tracking, delivery status, address information, and shipment condition. A troubleshooting question should be evaluated against the specific symptom and the documented diagnostic procedure.

When the knowledge base does not contain sufficient information to answer a question, the system should not manufacture an answer. It should clearly state that the available customer-support knowledge base does not contain sufficient information.

Source citations should identify the document, page, relevance, and retrieved text needed to explain the answer. Internal prompts, credentials, environment variables, and unrelated system information should never be exposed through citations.

Support Interpretation Example 1

Example 1: A customer uses informal language to describe a contoso devices product manual issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.

Support Interpretation Example 2
