

Shipping and Delivery Policy

Customer Support Knowledge Base

1. Order Processing

Orders are processed before shipment. Customers should provide an accurate delivery address and review order information carefully.

Processing and delivery are separate stages. A shipment cannot be considered delivered merely because an order has been placed.

2. Shipping Methods

Available shipping methods and delivery estimates may vary by order and destination. Standard and expedited options may be offered where available.

Customers should review the delivery estimate associated with their order rather than relying on a general estimate.

3. Shipping Confirmation and Tracking

A shipping confirmation may provide tracking information when the order enters the carrier process. Customers should use the provided tracking reference to monitor movement.

Tracking updates can take time to appear after a package is handed to the carrier.

4. Delayed Shipments

A delayed shipment may result from carrier processing, operational disruption, weather, address issues, or other circumstances. Check the latest tracking status before contacting support.

If a shipment remains delayed beyond the expected delivery window, contact support with the order and tracking information.

5. Lost Packages

If a package appears lost, customers should first review tracking and confirm the delivery address. If the package cannot be located, contact support for investigation.

Do not assume that a tracking status is permanently final if carrier information is still updating.

6. Delivered but Not Received

If tracking shows delivered but the customer cannot find the package, check the delivery location, household members, building reception, and other appropriate locations. Contact support if the package remains missing.

7. Damaged Packages

Customers should report packages or products that arrive damaged promptly. Delivery damage is distinct from a manufacturing defect and should be documented accurately.

8. Incorrect Address

Contact support as soon as an address error is discovered. Once a shipment has entered carrier processing, an address change may not be possible.

Customers are responsible for providing an accurate delivery address at order time.

9. Failed Delivery

If a carrier cannot complete delivery, follow the carrier instructions and review tracking updates. Contact support if repeated delivery attempts do not resolve the issue.

10. International Shipping

International availability and shipping restrictions depend on destination and product. Customers should review the available shipping options before placing an order.

11. Delivery Confirmation

A delivery confirmation indicates that the carrier has recorded delivery. If the package is not found, contact support so the situation can be reviewed.

12. Escalation

Shipping issues requiring investigation should include the order reference, tracking information, delivery address confirmation, and a concise description of the problem.

Delivery Scenarios

Scenario: Tracking says delivered but the customer cannot find the package. Check the delivery location and relevant household or building reception areas, then contact support if it remains missing.

Scenario: Package arrives visibly damaged. Document the condition and contact support promptly.

Scenario: Customer entered an incorrect address. Contact support as soon as possible; an address change may not be possible once carrier processing begins.

Scenario: Tracking has not updated immediately after shipment. Allow time for carrier systems to register movement before assuming the shipment is lost.

Shipping FAQ

Can I change an address after shipping? It may not be possible once the shipment enters carrier processing.

Does a tracking number guarantee an immediate update? No. Carrier updates can take time.

What should I do about a delayed shipment? Review tracking and contact support if it remains beyond the expected delivery window.

What information helps support investigate shipping? Order reference, tracking information, address confirmation, and issue description.

Detailed Customer Scenarios and Decision Examples

The following examples illustrate how the knowledge base should be applied to different customer wording. The examples intentionally use varied language so retrieval systems can connect related requests to the correct policy.

Tracking example

A customer receives a tracking number but no movement appears immediately. Carrier tracking systems may take time to update after shipment.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Delay example

A shipment remains beyond its expected delivery window. The customer should review tracking and contact support with the order and tracking information.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Delivered example

Tracking shows delivered but the customer cannot locate the package. They should check the delivery location and relevant reception areas before contacting support.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Address example

A customer notices an incorrect address after ordering. They should contact support immediately because changes may not be possible once carrier processing begins.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Damage example

A package arrives damaged. The customer should document the condition and contact support promptly.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Failed-delivery example

A carrier cannot complete delivery. The customer should follow carrier instructions and contact support if repeated delivery attempts do not resolve the issue.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Knowledge Retrieval Reference

Customer questions may use different terms from the policy. For example, a customer may say that an item is broken, faulty, damaged, defective, or not working. The support process should distinguish the underlying condition rather than relying on a single keyword.

A return question should be evaluated against the return period, product condition, reason for return, and applicable exclusions. A warranty question should be evaluated against warranty duration, covered conditions, and exclusions.

A shipping question should be evaluated against order processing, carrier tracking, delivery status, address information, and shipment condition. A troubleshooting question should be evaluated against the specific symptom and the documented diagnostic procedure.

When the knowledge base does not contain sufficient information to answer a question, the system should not manufacture an answer. It should clearly state that the available customer-support knowledge base does not contain sufficient information.

Source citations should identify the document, page, relevance, and retrieved text needed to explain the answer. Internal prompts, credentials, environment variables, and unrelated system information should never be exposed through citations.

Support Interpretation Example 1

Example 1: A customer uses informal language to describe a shipping and delivery policy issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.

Support Interpretation Example 2

Example 2: A customer uses informal language to describe a shipping and delivery policy issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.

Support Interpretation Example 3

Example 3: A customer uses informal language to describe a shipping and delivery policy issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.

Support Interpretation Example 4

Example 4: A customer uses informal language to describe a shipping and delivery policy issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.

Support Interpretation Example 5

Example 5: A customer uses informal language to describe a shipping and delivery policy issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.

Support Interpretation Example 6

Example 6: A customer uses informal language to describe a shipping and delivery policy issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.
