

Technical Troubleshooting Guide

Customer Support Knowledge Base

1. Device Does Not Turn On

Problem: Device does not power on.

Possible causes: Low battery, charging connection problem, temporary software issue, or hardware fault.

Steps to resolve: Connect the supplied charger, allow charging, verify the connection, and attempt the power control again. Restart using the applicable device procedure.

When to escalate: If the device remains unresponsive after appropriate charging and reset steps, contact support.

2. Device Will Not Charge

Problem: Battery does not appear to charge.

Possible causes: Loose connection, unsuitable charger, damaged cable, or device fault.

Steps to resolve: Use only the supplied charger, inspect the connection without forcing it, and retry charging.

When to escalate: If the device will not charge using the supplied equipment, contact support.

3. Battery Drains Quickly

Problem: Battery life is shorter than expected.

Possible causes: High usage, connectivity activity, background functions, software state, or battery condition.

Steps to resolve: Restart the device, review active features, and check for firmware updates.

When to escalate: Persistent abnormal battery behavior should be reported to support.

4. Bluetooth Cannot Connect

Problem: Device cannot pair over Bluetooth.

Possible causes: Bluetooth disabled, distance, stale pairing information, or temporary connectivity issue.

Steps to resolve: Enable Bluetooth, move closer, restart Bluetooth, remove the old pairing if appropriate, and pair again.

When to escalate: If repeated pairing attempts fail, contact support.

5. Bluetooth Disconnects

Problem: Bluetooth connection drops repeatedly.

Possible causes: Distance, interference, low battery, or software issues.

Steps to resolve: Move closer, ensure sufficient battery, restart both devices, and check for updates.

When to escalate: Persistent disconnections after troubleshooting should be reported.

6. Wi-Fi Cannot Connect

Problem: Device cannot join the Wi-Fi network.

Possible causes: Incorrect credentials, weak signal, unavailable network, or temporary configuration issue.

Steps to resolve: Verify the network and credentials, move within reliable range, restart the device, and retry setup.

When to escalate: Contact support if the device consistently cannot connect despite a working network.

7. Wi-Fi Disconnects

Problem: Connection repeatedly drops.

Possible causes: Weak signal, network instability, interference, or device configuration.

Steps to resolve: Check network stability, improve signal conditions, restart equipment where appropriate, and retry.

When to escalate: Persistent connectivity failure should be escalated.

8. Mobile Application Problems

Problem: The mobile application freezes, closes, or fails to connect.

Possible causes: Temporary application state, connectivity, outdated software, or device configuration.

Steps to resolve: Restart the application, verify internet access, and check for available updates.

When to escalate: Contact support if the issue continues after restarting and updating.

9. Voice Assistant Not Responding

Problem: Voice assistant does not respond.

Possible causes: Internet connectivity, outdated firmware, or temporary software state.

Steps to resolve: Check internet connectivity, update device firmware, and restart the device.

When to escalate: Contact support if the assistant remains unavailable after these steps.

10. Firmware Update Problems

Problem: Firmware update fails.

Possible causes: Connectivity interruption, insufficient power, or temporary update failure.

Steps to resolve: Ensure stable connectivity and sufficient power, then retry the update according to device instructions.

When to escalate: Do not repeatedly interrupt an update. Contact support if the update cannot complete.

11. Device Overheats

Problem: Device becomes unusually hot.

Possible causes: High operating load, environmental heat, or device malfunction.

Steps to resolve: Turn off the device and allow it to cool. Keep it away from extreme heat.

When to escalate: Contact support if overheating continues.

12. Slow Performance

Problem: Device responds slowly.

Possible causes: Temporary software state, background activity, outdated firmware, or connectivity conditions.

Steps to resolve: Restart the device and check for updates.

When to escalate: Persistent performance problems should be reviewed by support.

13. Device Not Responding and Reset

Problem: Device is frozen.

Steps to resolve: Use the normal reset procedure described in the product manual. A factory reset should only be used when appropriate because it may remove configuration information.

When to escalate: Contact support if the device remains unresponsive.

14. Error Messages

Record the exact error message and the circumstances in which it appears. Perform only the troubleshooting steps applicable to the error. Contact support with the recorded message if the issue persists.

15. Accessory and Cable Problems

Use the supplied accessories and charger. If an accessory or cable appears damaged, stop using it and contact support rather than attempting an unsafe repair.

16. Warranty and Escalation

If troubleshooting indicates a possible manufacturing defect, hardware malfunction, or component failure, the issue may require warranty review. Electronics have a 12-month warranty and accessories have a 6-month warranty, subject to the warranty policy. Physical damage, water damage, accidental drops, and unauthorized repairs are excluded from warranty coverage.

Diagnostic Scenarios

Scenario: Device will not power on after charging. Verify the supplied charger and connection, retry the power control, and use the normal reset procedure if appropriate.

Scenario: Wi-Fi works on other devices but not the Contoso device. Recheck network credentials, range, restart the device, and retry setup.

Scenario: Firmware update repeatedly fails. Maintain stable power and connectivity, retry according to instructions, and escalate if it cannot complete.

Scenario: Device overheats repeatedly. Turn it off, allow it to cool, keep it away from extreme heat, and contact support.

Troubleshooting FAQ

Should I use a third-party charger to test the device? No. Use only the supplied charger.

Should I open the device to repair it? No. Unauthorized repairs can affect warranty coverage.

Should I keep using an overheating device? No. Turn it off and allow it to cool.

When should I contact support? Contact support when appropriate troubleshooting does not resolve the issue or when a safety, physical-damage, or potential warranty issue requires review.

Detailed Customer Scenarios and Decision Examples

The following examples illustrate how the knowledge base should be applied to different customer wording. The examples intentionally use varied language so retrieval systems can connect related requests to the correct policy.

Power diagnostic

Confirm the supplied charger is connected, allow sufficient charging time, and retry the power control. If the device remains unresponsive, escalate.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Bluetooth diagnostic

Check Bluetooth availability, distance, battery level, and old pairing information. Restart both devices and retry.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Wi-Fi diagnostic

Verify the network and credentials, improve signal conditions, restart the device, and retry setup.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Application diagnostic

Restart the mobile application, verify internet access, and check for available updates.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Overheating diagnostic

Turn off an overheating device, allow it to cool, keep it away from extreme heat, and contact support if the problem continues.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Update diagnostic

Maintain stable power and connectivity during firmware updates. If an update repeatedly fails, contact support rather than repeatedly interrupting the process.

Recommended support approach: identify the customer's intent, locate the applicable documented rule, state only what the knowledge base supports, and provide the next appropriate action. If eligibility cannot be established from

the available information, request the relevant details or direct the customer to support review rather than inventing an exception.

Knowledge Retrieval Reference

Customer questions may use different terms from the policy. For example, a customer may say that an item is broken, faulty, damaged, defective, or not working. The support process should distinguish the underlying condition rather than relying on a single keyword.

A return question should be evaluated against the return period, product condition, reason for return, and applicable exclusions. A warranty question should be evaluated against warranty duration, covered conditions, and exclusions.

A shipping question should be evaluated against order processing, carrier tracking, delivery status, address information, and shipment condition. A troubleshooting question should be evaluated against the specific symptom and the documented diagnostic procedure.

When the knowledge base does not contain sufficient information to answer a question, the system should not manufacture an answer. It should clearly state that the available customer-support knowledge base does not contain sufficient information.

Source citations should identify the document, page, relevance, and retrieved text needed to explain the answer. Internal prompts, credentials, environment variables, and unrelated system information should never be exposed through citations.

Support Interpretation Example 1

Example 1: A customer uses informal language to describe a technical troubleshooting guide issue. The correct response should map the customer's description to the closest documented policy or procedure, avoid unsupported assumptions, and identify the relevant next step. If the available documentation is insufficient, the response should stop at the knowledge-base limitation instead of supplying unrelated general knowledge.
